

PRODUCT STEWARDSHIP POLICY

Future Foams as a responsible corporate entity is committed to assessing all hazards associated with their manufacturing process and its products and pledges to minimise any environmental impact, costs and or risks to the community.

As a manufacturer we source raw materials for our own manufacturing process, and in turn our own products become raw materials in an immense range of products in all walks of community life.

- We commit to purchasing raw materials from companies with published acceptable environmental and safety standards.
- All chemicals purchased will stored, handled and processed in accordance with Australian Legislation and Standards, using well maintained and safe equipment and processes.
- Our staff will be fully trained in handling and processing these raw materials and chemicals, and a register of the training will be kept by the company.
- Our production process will be carried out in suitable facilities in compliance with all legislation and we will hold the necessary licences and approvals.
- Our emissions will adhere to all relevant EPA licence conditions, and ongoing efforts will be made to reduce all emissions to both land and air.
- We will constantly endeavour to reduce waste products (including Chemicals), and if they cannot be used in other products or applications, disposal of all waste will be in accordance with local regulations.
- New plant and equipment introduced to the business will be assessed, with one of the assessment criteria being reducing scrap, waste and emissions.

It should be noted that this Policy is in addition to our Environmental Policy.
